

IN THE CLAIMS

Please cancel claims 1-49 and insert the following therefor:

50. (New) A system for differentiating two or more cables of two or more
respective appliances, the system comprising a respective tying device for
tying to a respective cable, wherein each tying device is provided in a
differentiated form from each other tying device.
51. (New) A system as claimed in claim 50 wherein the tying device is used for
identifying a cable of an electrical appliance, the tying device being attachable
to the cable and having a preprinted appliance name thereon or positionable
thereon.
52. (New) A system as claimed in claim 51 wherein the preprinted or positionable
appliance name is located on an external surface of an enlarged portion of the
tying device.
53. (New) A system as claimed in claim 51 wherein a plurality of the tying devices
are supplied as part of a unit and are detachable from the unit for use.
54. (New) A system as claimed in claim 53 wherein the unit is a card.
55. (New) A system as claimed in claim 50 wherein each tying device comprises:
- an elongate member for releasable securement at a cable by wrapping around
the cable; and
- a planar enlarged portion arranged on the member for insertion through a
hole located in the member, the enlarged portion being at least in part of a
thickness greater than a narrowest width dimension of the hole, and at least
in part of a transverse width greater than a corresponding width dimension of
the hole.
56. (New) A system as claimed in claim 55 wherein the enlarged portion is located
at one end of the elongate member.
57. (New) A system as claimed in claim 56 wherein the hole is located adjacent to
an opposite end of the elongate member.
58. (New) A system as claimed in claim 55 wherein the enlarged portion defines a
shoulder where it joins the elongate member such that, in use, when the
enlarged portion has been inserted through the hole, the shoulder is seated at
and abuts an edge of the hole to releasably secure the device at the cable.

59. (New)A system as claimed in claim 58 wherein the shoulder is at least partially rounded.
60. (New)A system as claimed in claim 58 wherein the shoulder is bevelled.
61. (New)A system as claimed in claim 55 wherein the width of the hole is
5 equivalent to or greater than the width of the elongate member.
62. (New)A system as claimed in claim 55 wherein a remote end of the enlarged portion is tapered to facilitate insertion thereof into the hole.
63. (New)A system as claimed in claim 55 wherein the enlarged portion of the device at least is made of a flexible material.
- 10 64. (New)A system as claimed in claim 55 wherein the elongate member is a strap.
65. (New)A system as claimed in claim 55 wherein indicia are pre-applied to an external surface of the portion which in use can facilitate identification of a cable to which the tying device is releasably secured.
66. (New)A system as claimed in claim 50 wherein each tying device comprises:
15 - an elongate member for releasable securement at a cable by wrapping around the cable; and
- an enlarged portion connected to the elongate member and being insertable through a hole located in the member;
wherein the member has a width less than the enlarged portion at the connection
20 between the member and enlarged portion to define a shoulder at the enlarged portion such that the device widens moving from the member to the enlarged portion at the connection therebetween.
67. (New) A system as claimed in claim 66 wherein the tying device is as otherwise defined in claim 9.
- 25 68. (New) A system as claimed in claim 50 wherein each tying device comprises:
- an elongate member for releasable securement at a cable by wrapping around the cable;
- a planar enlarged portion arranged on the member for insertion through a hole located in the member, the enlarged portion including a raised portion
30 thereon to provide that part of the enlarged portion with a thickness greater than a remainder of the enlarged portion;

the device being configured such that the enlarged portion can be passed from one side of the member, completely through the hole, to an opposite side of the member to be secured at the opposite side.

- 5 69. (New) A system as claimed in claim 68 wherein the enlarged portion has a transverse width which is greater than the transverse width of the elongate member.
70. (New) A system as claimed in claim 68 wherein the elongate member has the same thickness as the remainder of the planar enlarged portion.
- 10 71. (New) A system as claimed in claim 68 wherein indicia are pre-applied to an external surface of the raised portion.
72. (New) A system as claimed in claim 68 wherein the device is as otherwise defined in claim 63.
- 15 73. (New) A card comprising a plurality of detachable elongate members, each of the members being frangibly joined to the card for detachment therefrom, an enlarged portion being defined in at least one of the members for insertion in use through a hole located in the member, the enlarged portion being defined in claim 6.
- 20 74. (New) A card as claimed in claim 73 wherein the enlarged portion has a transverse width greater than the transverse width of an adjacent portion of the elongate member.
75. (New) A card as claimed in claim 73 wherein the elongate portion has a transverse width greater than a corresponding transverse width of the hole.
76. (New) A card as claimed in claim 73 to wherein the members are each made of the same material as the card.
- 25 77. (New) A card as claimed in claim 73 wherein each member is a tying device as otherwise defined in claim 50.
- 30 78. (New) A card comprising a plurality of detachable elongate members, each of the members being frangibly joined to the card for detachment therefrom, an enlarged portion being defined in at least one of the members for insertion in use through a hole located in the member, the enlarged portion being defined in claim 66.

79. (New) A card as claimed in claim 78 wherein the enlarged portion has a transverse width greater than the transverse width of an adjacent portion of the elongate member.
80. (New) A card as claimed in claim 78 wherein the elongate portion has a transverse width greater than a corresponding transverse width of the hole.
81. (New) A card as claimed in claim 78 to wherein the members are each made of the same material as the card.
82. (New) A card as claimed in claim 78 wherein each member is a tying device as otherwise defined in claim 50.
83. (New) A card comprising a plurality of detachable elongate members, each of the members being frangibly joined to the card for detachment therefrom, an enlarged portion being defined in at least one of the members for insertion in use through a hole located in the member, the enlarged portion being defined in claim 68.
84. (New) A card as claimed in claim 83 wherein the enlarged portion has a transverse width greater than the transverse width of an adjacent portion of the elongate member.
85. (New) A card as claimed in claim 83 wherein the elongate portion has a transverse width greater than a corresponding transverse width of the hole.
86. (New) A card as claimed in claim 83 to wherein the members are each made of the same material as the card.
87. (New) A card as claimed in claim 83 wherein each member is a tying device as otherwise defined in claim 50.
88. (New) A card comprising a plurality of detachable elongate members, each of the members being frangibly joined to the card for detachment therefrom, an enlarged portion being defined in at least one of the members for insertion in use through a hole located in the member, the enlarged portion being defined in claim 66.
89. (New) A card comprising a plurality of detachable elongate members, each of the members being frangibly joined to the card for detachment therefrom, an enlarged portion being defined in at least one of the members for insertion in use through a hole located in the member, the enlarged portion being defined in claim 68.

90. (New) An electrical appliance cable identification tying device for attachment to the cable and having pre-applied indicia indicating the name of the appliance thereon.
91. (New) An electrical appliance cable identification tying device as claimed in claim 90 that is a tying device as otherwise defined in claim 50.
92. (New) A tying device comprising:
- an elongate member for releasable securement at a cable by wrapping around the cable; and
 - a planar enlarged portion arranged on the member for insertion through a hole located in the member, the enlarged portion being at least in part of a thickness greater than a corresponding thickness dimension of the hole, and at least in part of a transverse width greater than a corresponding width dimension of the hole.
93. (New) A tying device as claimed in claim 92 wherein the portion is arranged for bearing indicia or for being labelled with indicia.
94. (New) A tying device as claimed in claim 93 wherein the indicia is a name capable of being understood by a human user.
95. (New) A tying device as claimed in claim 92 wherein the tying device is as otherwise defined in claim 50.
96. (New) A tying device comprising:
- an elongate member for releasable securement at a cable by wrapping around the cable; and
 - an enlarged portion connected to the elongate member and being insertable through a hole located in the member,
- wherein the member has a width less than the enlarged portion at the connection between the member and enlarged portion to define a shoulder at the enlarged portion such that the device widens moving from the member to the enlarged portion at the connection therebetween.
97. (New) A tying device as claimed in claim 96 wherein the portion is arranged for bearing indicia or for being labelled with indicia.
98. (New) A tying device as claimed in claim 97 wherein the indicia is a name capable of being understood by a human user.

99. (New) A tying device as claimed in claim 96 wherein the tying device is as otherwise defined in claim 50.
100. (New) A tying device comprising:
- an elongate member for releasable securement at a cable by wrapping around the cable;
 - a planar enlarged portion arranged on the member for insertion through a hole located in the member, the enlarged portion including a raised portion thereon to provide that part of the enlarged portion with a thickness greater than a remainder of the enlarged portion;
- the device being configured such that the enlarged portion can be passed from one side of the member, completely through the hole, to an opposite side of the member to be secured at the opposite side.
101. (New) A tying device as claimed in claim 100 wherein the portion is arranged for bearing indicia or for being labelled with indicia.
102. (New) A tying device as claimed in claim 101 wherein the indicia is a name capable of being understood by a human user.
103. (New) A tying device as claimed in claim 100 wherein the tying device is as otherwise defined in claim 50.
104. (New) A system for differentiating two or more containers for containing two or more respective items, the system comprising a respective tying device for labelling each respective container, wherein each tying device is provided in a differentiated form from each other tying device.
105. (New) A system as claimed in claim 104 wherein each tying device identifies its respective container, the tying device being attachable to a neck of the container, or a container neck formed by folding of the container, the tying device having a preprinted container name thereon or positionable thereon.
106. (New) A system as claimed in claim 105 wherein the preprinted or positionable container name is located on an external surface of an enlarged portion of each tying device.
107. (New) A system as claimed in claim 105 wherein the container is a plastic bag.
108. (New) A system as claimed in claim 104 wherein the tying device is as otherwise defined in claim 1.
